

How To Specify a Z415 Type Floor Drain

Note:

To specify a Z415 type floor drain, use the appropriate Specification Sheet for the model desired. The Specification Sheet lists the standard range of product variations, such as available materials, connection sizes & types, standard accessories, etc. and their proper designations for use in ordering/specifying.

Procedure:

For example, to specify a Z415 floor drain with the following features:

6" Type B Strainer (6B per spec sheet)	3" No-Hub outlet connection (3NH per spec sheet)
Nickel Bronze Top (ZN per spec sheet)	Backwater Valve (V per spec sheet)
Sediment Bucket (Y per spec sheet)	Vandal-Proof Secured Top (VP per spec sheet)
Trap Primer Connection (P per spec sheet)	

The roof drain would be specified as follows:

ZN415 - 3NH – 6B - P – V - VP - Y

The breakdown would be:

Top Material Prefix	Drain Series Model Number	Outlet Conn. Size/Type	Strainer Size/Type	Option Suffix	Option Suffix	Option Suffix	Option Suffix
ZN	415	- 3NH	- 6B	- P	- V	- VP	- Y
Nickel Bronze Top	Z415 Series Drain	3" No-Hub Connection	6" B Type Strainer	Trap Primer Connection	Backwater Valve	Vandal-Proof Screws	Sediment Bucket

Notes:

1. The corresponding prefix (ZB, ZN, etc.) must be used in the Top Material Prefix to specify the bronze, nickel bronze, etc. top finish desired. Refer to the Prefixes section of the Specification Sheet for the particular model drain for available top materials and their prefixes.
2. Dashes are used to separate the Outlet Conn. Size/Type designation and the Option Suffix letters. Note that there is **no** dash between the Top Material Prefix and Drain Series Model Number.
3. Note that the Option Suffixes (P, V, VP, Y) are listed alphabetically. This is the preferred method
