

GREASE, OIL AND SEDIMENT SEPARATION

Protect your customers' businesses and our environment with unrivaled performance.

As a commercial plumbing company, we've seen it all. Our professionals offset the rigorous demands of commercial use and understand the difference in performance, interceptor to interceptor. Zurn's systems separate waste, control odor, and optimize space. Our clients find great value in that.

DAVE NEWAR

MR. ROOTER BUSINESS DEVELOPMENT MANAGER

ZURN

A RELIABLE PARTNER

We're Solving Smarter

At Zurn, we aren't just a product and service provider, we're problem solvers – continuously focused on water control, safety and conservation. From our drains and backflow products to our finish plumbing, piping systems, and of course, our full line of patented hydro-mechanical and gravity grease, oil and solids interceptors, we are known throughout the industry as a reliable leader.

SEPARATE FROM
THE COMPETITION

Solid Choice for a Solid Reputation

Whether it's a five-star restaurant or 24-hour carwash, smooth operations and a pleasant environment keep patrons happy. Businesses' reputations rest on it and employees work around the clock to uphold it.

That's why, fats, oils and grease (FOG) – with problems like odor, clogged pipes, safety concerns, or even environmental fines – make such unwanted guests. Interceptors capture FOG before it clogs pipes or enters the sewer waste system. No matter the industry, you can expect Zurn to have a system that works as hard as your customers and their staff.

Grease and Oil Interceptors

In-Kitchen Grease Interceptors

Hair and Lint Interceptors

Sediments and Solids Interceptors

A high-speed train with a white and blue livery is stopped at a modern train station platform. The platform has a dark metal railing and a tactile paving strip. The sky is a vibrant mix of orange, pink, and purple, reflecting on the train's windows. The train is positioned on the right side of the frame, with the tracks leading into the distance. The overall scene is captured during the 'golden hour' of sunset, creating a dramatic and atmospheric setting.

READY FOR
ANYTHING

Solving by Industry

We match our selection with your customers' ranging industries, whether it's auto care or comfort food.

Food & Beverage

All food preparation, whether it's fried fish or lean meat and vegetables, produces grease and interferes with plumbing and sewer lines. Add cleaning chemicals to the mix, and even the smallest mom and pop needs a reliable system solution.

Commercial

Malls, department stores, c-stores, and banks contain kitchens, which create FOG. Space can be limited from urban infrastructure or a jam-packed parking lot. Find a system that can take on the volume of wastewater and fit in even the tightest configurations.

Recreational

Sports facilities and resorts experience a lot of patrons all at once, over and over. So no matter if it's concession food and refreshments or every relaxing amenity possible under one roof, if there's a high volume of people, there's high demand on the interceptor system.

Healthcare

Innovative, value driven, and vast, the healthcare industry demands its own category for its size and sensitive nature. Every facet is critical. Our patented interceptor systems cover the range, regulations, and environment without fail.

Vehicle Maintenance

Move over oil, sediment, and sudsy cleaners. Auto shops, carwashes, gas stations, and truck stops bring a lot of flow-through traffic from people grabbing food and cars filling up, being washed, and kicking up pavement. It's a whole new level of high traffic demand and oily wastewater management challenges.

Public Services

With public safety and wellbeing in the balance on a daily basis, nothing can disrupt operations for fire stations, schools or local institutions. Keep them running smoothly and in compliance with a system that handles food waste and industrial strength chemicals with care.

Transportation & Industrial

This industry – airports, manufacturing, docks and ports, train stations – is under the most scrutiny from media and government agencies when it comes to what goes into the public sewer system. Stay ahead of codes and the next story with a system that works overtime without being noticed.

DOWNTIME
IS MONEY

Lowest Total Cost of Ownership

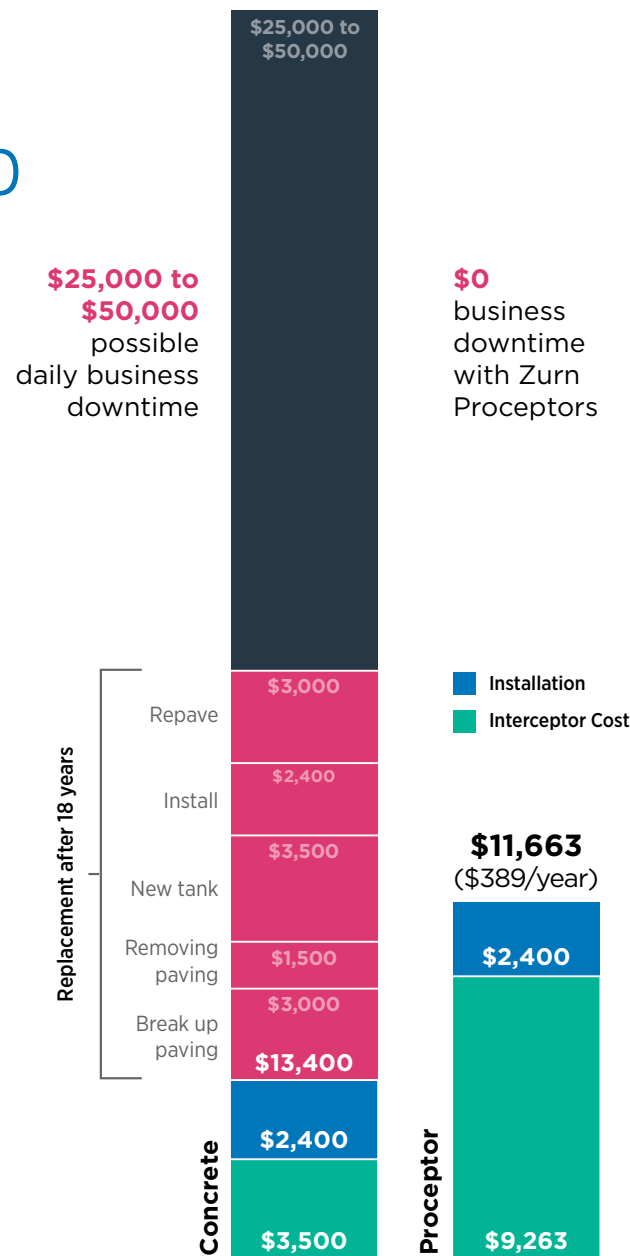

If time is money, downtime is a pretty penny. With everything that goes into running a business, standing still costs lost revenue, productivity, maintenance or upgrades, and even hefty penalties. A failed interceptor is enough to take down the operations with it.

So how does a system designed for a very specific purpose fail in the first place? Food waste, grease and solids create a harsh, acidic environment – an environment that eats away at concrete interceptors. It’s not about if; the question becomes a matter of when.

Here’s where the plot thickens. You’re not just up against unforgiving elements. It’s easy to miss the warning signs of a failing system without fully draining and inspecting the structural integrity. If replacement is needed, there could be costly damage to the property, and kitchen or parking lot construction by the time it’s caught.

This disruption affects business profits with unplanned closure and potential fines. What price does this add up to? Perhaps, double or even triple over the lifecycle of the facility.

Zurn’s portfolio delivers the lowest cost of ownership (with the highest peace of mind).

A photograph of a gas station with several fuel pumps. The pumps have different colored nozzles: blue, yellow, green, and white. The background is slightly blurred, showing the station's structure and some greenery. The text "PURSUIT TO OUTPERFORM" is overlaid in a large, white, sans-serif font across the middle of the image.

PURSUIT TO OUTPERFORM

High Quality

Solving for our customers requires a relentless pursuit to outperform... even our own systems. Before we bring a new product to our customers, we put our prototypes to the test at our in-house hydraulics laboratory. From there, every Zurn Proceptor and Retroceptor follows a patented manufacturing process in our state-of-the-art registered facility.

LOW MAINTENANCE

As we know, concrete doesn't hold up. Our Proceptor uses a resin transfer molding and cylindrical computerized winding. The engineered precision and design actually predates confirmed findings from the Water Environment Research Foundation by well over a decade. Our patented fiberglass construction won't rust or corrode no matter the conditions or elements.

Large pollutant retention capacities extend time between pump-outs. The smooth, non-porous walls and rounded bottom additionally curtail the frequency for deep cleaning and scraping, making maintenance faster. Plumbing engineers know once it's installed there won't be a follow-up call. Customers benefit from a quality purchase without question.

WARRANTY WON'T FAIL EITHER

Business owners deal with enough stress and the unforeseen day in and day out. That's why we throw in worry-free protection, on top of our system performance. We don't believe in simply putting a period after our claims. Our warranties last longer than most buildings.

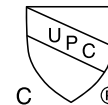

CAPABLE AND COMPLIANT

Any Application. Every Regulation.

Every jobsite presents unique challenges, whether it's emerging codes, high flow rates or a demanding kitchen environment. Our hydro-mechanical and gravity grease interceptors meet the most rigorous installation requirements and national plumbing regulations.

Zurn adheres to the national wastewater pretreatment guidelines, while allowing for custom configurations for every application. Plus, with a dealer network throughout the United States and Canada, you can rest assured the system you choose will be approved by your local regulator.

COMPLETE SUPPORT AND SELECTION

Expert Advice. Exact Fit.

You know your upcoming project inside out, but that doesn't mean you're sold on what solution will work up to the challenge. That's where our experts come in. We work with municipalities, contractors and engineering firms every day to answer questions and specify solutions.

Consult with Zurn's application engineering and design team for regulatory support, formatted drawings, installation questions, or simply to learn more about our product portfolio. We understand regulatory requirements, sizing, technical drawings, and your customers' demands.

SOLUTIONS THAT SOLVE

Our systems cover grease, hair and lint, sediments and solids, or oil and solids.

Check off your project prerequisites:

- ✔ Waste type
- ✔ Location and coding
- ✔ Size requirements
- ✔ Above or below ground

Choose from durable materials:

- ✔ Fiberglass (lifetime warranty)
- ✔ Polymer (acid-resistant)
- ✔ Stainless steel (corrosion and rust resistant)
- ✔ Steel (extremely durable and wear resistant)

Customize your order:

- ✔ Made to order for exact fit (expect two-week lead time)
- ✔ Configuration for double manway to triple manway and in-series systems
- ✔ Options per engineering, architect, and owner design requirements
- ✔ Multiple tank configurations available in place of impossible-to-maintain interceptors too large to pump

A RESPONSIBLE CHOICE

Protect the Environment and Their Business

Water is the most precious shared resource – vital for many aspects of daily life. By taking proper measures, we can protect it together.

Clogs form when fats, oils and grease are improperly discarded, such as being washed down sinks or floor drains. In time, these practices cause sewer backups, costs to repair, and ultimately harm to the environment. Failing interceptors can also contaminate the surrounding soil and groundwater. Even with diligent maintenance and protective coating, you can't avoid seepage once a system begins failing.

We can make a positive impact on businesses and our environment. Installing a quality interceptor is a responsible choice your customers and you can feel good about.

Interceptors for Every Application

Find a system that fits the space and fills the bill without looking further than Zurn. Our interceptors deliver total compliance, lowest total cost of ownership and the most comprehensive warranties in the industry. It's not so we can be the best; it's so your customers can be their best without obstacles in the way.

Grease and Oil Interceptors

Leave it to the pro. Our gravity grease interceptors feature a patented flow management design and corrosion-proof fiberglass construction for ownership peace of mind. It works in situations where most other systems simply wouldn't cut it, such as above-ground installs, parking garages, zero lot line conditions, and restricted space configurations.

Concrete grease and oil interceptors are not built to last forever. Why install a system with an expiration date? Proceptor systems won't corrode, won't leak, won't crack, and won't fail. Choose a solution that withstands the elements and the test of time.

- ✔ Corrosion-resistant
- ✔ Superior efficiency
- ✔ Design and install flexibility
- ✔ Lowest lifecycle costs

In-Kitchen Grease Interceptors

Fast acting, yet compact, our hydro-mechanical grease interceptors are a smart upgrade for aging grease traps. Tough polymer construction, industrial-style lid gasket and non-removable thumb screws help commercial-grade operations keep odors out of the food prep area. They won't rust, deteriorate, cross contaminate or clog. Best of all, they keep up with high volumes without problem. Make Zurn's system the last grease interceptor they'll purchase and you the first plumbing professional they'll trust.

- ✔ Corrosion-resistant
- ✔ Superior efficiency
- ✔ Small footprint and easy to install
- ✔ Odor eliminating

Sediments and Solids Interceptors

Ideal for commercial and industrial jobsites, these systems can handle whatever you throw at them. Prevent sand, gravel, sediment, food solids, metal particles, lint and debris from getting in the way and blocking drain lines. With options in material, flow rate and specs, you'll find a system that's easy to install and hard wearing long after.

- ✔ Available in steel, stainless steel, polymer, and fiberglass
- ✔ Removable sediment basket
- ✔ 4-500GPM flow rates
- ✔ 4-1500 gallon water capacities

Hair and Lint Interceptors

Hair, lint and sediment block drain lines, which can leave a business stranded from unplanned maintenance. Prevent a hairy situation with interceptors dedicated to hair salons, barber shops, surgery prep areas, and laundromats. Our systems even safeguard against rings and other valuable jewelry that may fall down the drain. Best of all, the removable sediment basket makes it easy to clean and a cut above the rest.

- ✔ Compact design with durable construction
- ✔ Removable sediment basket
- ✔ Easy bottom access

The background image shows a large industrial facility, likely a water treatment plant. Several large, blue cylindrical tanks are visible, some with yellow bands around their midsections. The tanks are connected to a complex network of pipes, valves, and machinery. A yellow bucket is on the floor near one of the tanks. The ceiling is high with exposed pipes and lighting fixtures. The overall scene is industrial and well-maintained.

I recommend the Proceptor for its uninterrupted performance. We've maintained and installed these interceptors for several years. Each system is easy to install, pump out and clean. We also receive friendly, readily available technical support any time we need it.
